MENTAL HEALTH

Group 1

FINAL PROJECT DEMO PRESENTATION

Steps Toward a Balanced Mind and Life

David Binder, Alec Bruce, Bethany Ledford, Brandon Redden, & Colton Savage

PROJECT OVERVIEW &

S/W ENGINEERING PRINCIPLES

Project Overview

- Secure, web-based platform for mental health patient care
- Supports Patients, Providers, Admin Staff, & System Admins
- Centralizes scheduling, data, communication, & wellness tracking

Key Features

- Secure authentication & patient dashboard
- Appointment scheduling & telehealth
- Mood / wellness tracking & risk flagging
- Personalized analytics

Principles

Agile Methodology
Sprints with a tracked backlog; iterative builds and testing

Modular Architecture
Django MVT (Models – Views – Templates) keeps concerns separate

Version Control
Git + GitHub feature branches; pull requests document all progress

Why it matters:
Improves flexibility – Manages scope & deadlines – Encourages continuous improvement

DEVELOPMENT ENVIRONMENT & TOOLCHAIN

VS Code (IDE)

- Central dev hub with IntelliSense (Python autocomplete), Postgres Explorer, and integrated Git
- Reduces context-switching across terminal, DB, and version control

Django Framework

- Rapid Python backend with built-in auth & ORM
- MVT pattern enforce clean separation of concerns

Git & GitHub

- Feature branches merged via pull requests
- Tracks history, prevents overwrites, enables rollback

PostgreSQL

- Relational DB for structure, HIPAA-conscious data storage
- Supports complex queries and secure data management

HOW IS OUR PROJECT DIFFERENT?

Mental-Health-Focused Features

- Mood tracking, wellness scoring, and risk flagging, which is beyond the baseline SRS
- Long-term mental-health analytics for personalized care

Integrated Telehealth

- Secure live video calls
- Expands basic messaging into full telehealth capacity

Expanded Patient Engagement

- Holistic features not in the baseline SRS, which increases patient involvement

LIVE DEMO

THANK YOU!
